

PROJECT DESCRIPTION

Of The GameBattle Android App

I am going to present and lead you through my self-made app „GameBattle“, that I created with the goal of learning more about Android development and Java projects.

As it can be seen, when oppening the app, a start menu opens, showing the user different options to continue.

It should be noted, that on top of every page there is an embedded link that may help the user.

This is the app-logo of „GameBattle“ that I created.

This is the first page you encounter after you first open the app

It has several buttons with links to different pages and sites

- Rules-this links you to a special webpage for the app. It is a git hub page to tell you about the game and more
- Choose name - this takes you to the name page where users can add their nicknames
- New game - takes you to the most important page . the gamepage to enjoy the game and have fun
- About - takes you to about us page. To know briefly about the developer and the app.

nickname generator

Name Selection

White

Player 1

Black

Player 2

Done

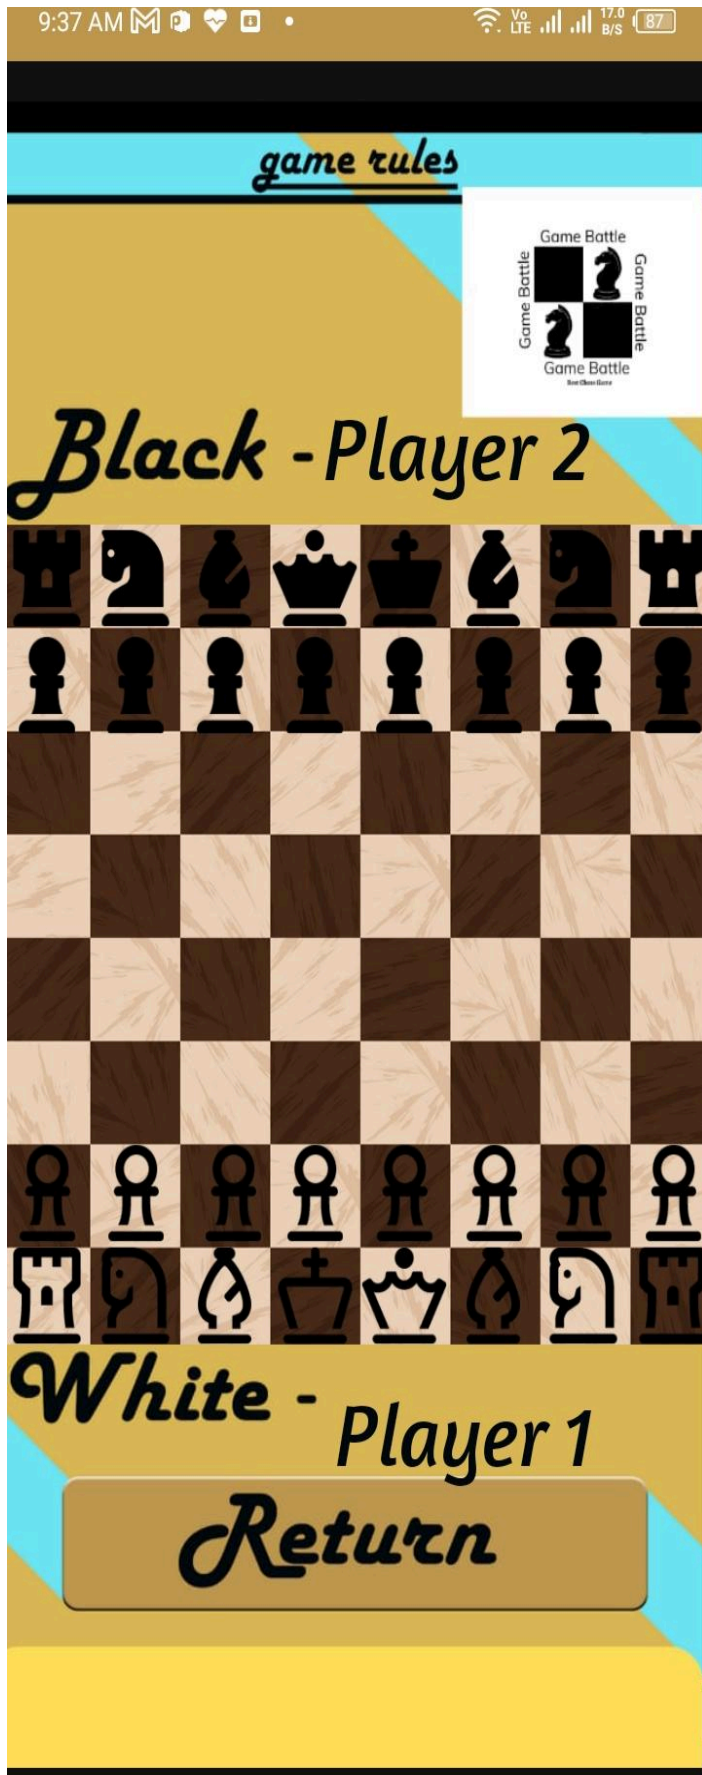

THE NAME PAGE

You choose either black or white and your opponent will be the other color

Please note that the default names are

- Player 1
- Player 2

When done close and go to the previous page using the **Done** button

THE GAME PAGE

On top of the page is a link to a site of the game rules for those new to chess.

You will need internet connection as it takes you to your default browser. I am looking forward to add to page to my app directly on my next update

Then there is the color and player Name to help now your side same to the opponents side

I will have to make note that some of the pieces are not moving to space intended as at 7th July 2024 my next update will solve this .

After there is a winner it will bring this

*Congratulations,
Black wins!*

THE ABOUT PAGE

On the „About“ page I have just written a little about the app itself and how I did it.

Some more documentation can be found on Github:
<https://mutheeji.github.io/atomic-landing-page/>

- Has a link to git hub on top
-
- Image of developer
-
- Short description
- And back button
- Also developer name

**Pages displayed are for when
you click rules on the first page
and rules on the game page**

Features

About the Project

The idea for Atomic was inspired by a passion for strategic games and a desire to create a platform where users can improve their skills through various challenges. This project is part of our Portfolio Project for Alx software engineering.
